INTRODUCTION

Port Manatee is a deep-water seaport located at the entrance of Tampa Bay, Florida. It serves as a key logistics and trade hub for a wide range of cargo, including breakbulk, bulk, project cargo, and containers. Its proximity to the Gulf of Mexico enables easy access for international shipping routes. The port has extensive facilities for steel products such as wire rod coils and supports vessel operations with both shore-based and ship's cranes.

APPROACH AND ENTRANCE

- - Access via Tampa Bay Ship Channel, through Egmont and Cut J Channels.
- - Channels are well buoyed and maintained by the US Army Corps of Engineers.
- - IALA Region B buoyage system (red to starboard when entering).
- - Depth in approach channel: approx. 12.8 - 13.0 meters.
- Vessels to follow routing and clearance instructions provided by the Tampa Bay Pilots

TIDES AND WEATHER

- - Tidal Range: 0.6 to 1.2 meters (diurnal)
- - Tidal Currents: Generally mild, up to 1 knot
- - Weather: Subtropical climate; hot summers with thunderstorms possible

PILOTAGE & VTS

- - Pilotage is compulsory; handled by Tampa Bay Pilots
 - - Pilot Boarding Area: Near Egmont Key
 - - VHF Channels: Channel 16 (initial contact), Channel 12 or 14 (working)
- Vessels must be registered with Tampa Bay VTS prior to arrival**

WEATHER & SWELL CONDITIONS

- - Swell generally mild due to protected location
- - High winds and storms possible during hurricane season (June–Nov)
- - Tropical systems can cause operational delays

STEVEDORES:

- Stevedoring services provided by contracted local companies
- Stevedores coordinate with vessel for discharging operations
- Crew required to supervise and maintain safe operation of ship's cranes

Cargo Ops:

Cargo discharged using 2 Ships cranes and Shore grabs.

24 hrs discharge.

Average discharge rate: 150 MT per hour / per crane

BALLAST EXCHANGE REGULATIONS:

- - Compliance with USCG Ballast Water Management regulations is mandatory
- - Ballast Water Management Plan and Ballast Water Record Book must be onboard

LOW SULPHUR REGULATION:

- - Vessels must burn fuel with $\leq 0.1\%$ sulphur content while within North American ECA
- - Switch to compliant fuel must be completed before entering ECA waters

MOORING MEN:

- - Shore-based professional mooring gangs provided by port authority
- - Arranged via vessel agent
- - Present for all berthing/unberthing operations

TUG ASSISTANCE

- Tugs available and arranged through Tampa Bay Pilots
- - Typically 1-2 tugs depending on vessel size and weather conditions

ANCHORAGE

- • Located outside Egmont Channel
- - Holding ground: Good (mud/sand)
- - Used for waiting berth or inspection
- - Anchorage permission required from VTS
-

PRE-ARRIVAL & CUSTOMS INFORMATION

- - Electronic Notice of Arrival (eNOA) must be submitted 96/72/48/24 hrs before arrival
- - Clearance by CBP, USCG, USDA and Port Health required
- - Documents handled via local agent

PORT SECURITY & SAFETY

- - ISPS Level 1 (standard)
- - Strict port security; valid ID and visitor access control required
- - USCG or CBP may conduct random inspections

GANGWAY:

- - Ship must rig safe gangway with lifebuoy, net, illumination
- - Gangway watch required at all times

GARBAGE DISPOSAL CHARGES

- - Garbage removal service available via agent
- - Separate charges for MARPOL Annex I (sludge, bilge) and Annex V (garbage)

FRESH WATER

- - Available via shore pipeline at berth
- - Potable quality
- - Rate: Approx. 10–20 MT/hr
- - Cost: Approx. USD 5–7 per MT(Extra charges for connection)
- - Prior arrangement through agent recommended

UKC

- - Approach channel: Maintain minimum 10% of vessel draft as UKC
- - At berth: Minimum 0.30 m under keel clearance at all times

PROVISION

Provision can be purchased as per company policy.

SHORE LEAVE

- - Permitted with valid shore pass
- - Crew transport, SIM cards available via agent or ship
